

9 Advantages of Fiber Optic Systems For buildings, condominiums require this system.

Advantages of Fiber Optic Systems Suitable for buildings, villas, hotels, condominiums, apartments, etc. are as below.

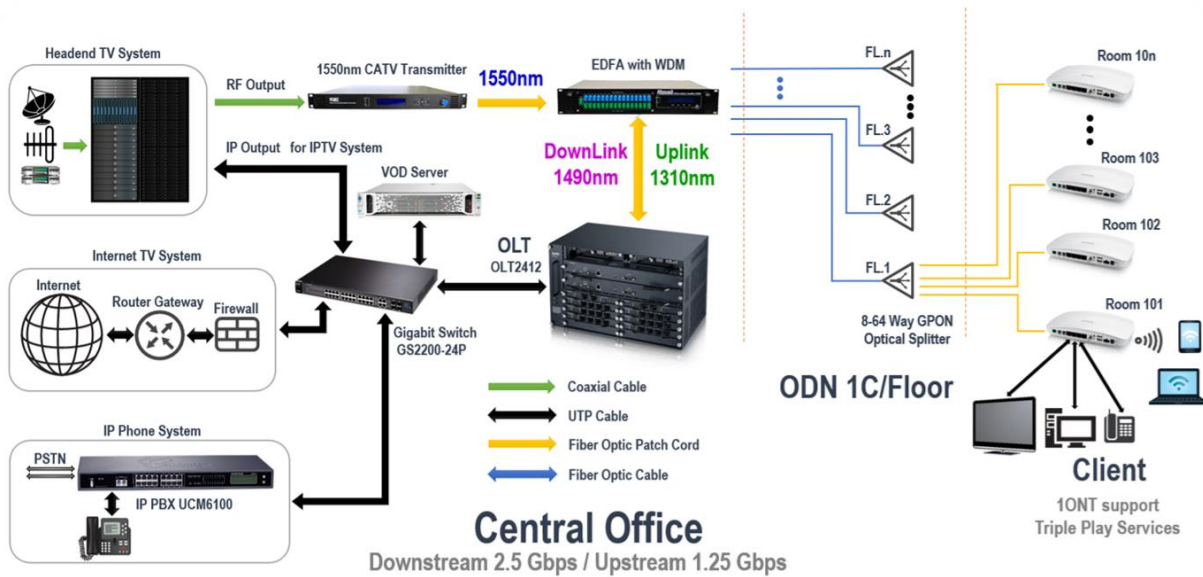

1. Originally, there must be at least 3 lines of communication (cable TV, Internet line, telephone line) to convert into fiber optic cables that support communication. Internet system, telephone system, TV in the same line.
2. Reduce space and reduce the cost of install rails and pipes. Easier management of Shafts. And reduce the cost of running rail Fitting (Fitting) at least 50-70%
3. Low attenuation The length of the line is from 1 to 10 kilometers. Stable No need to take the distance to calculate. Make it easy to design. Ideal for Villa Resort Village Village.
4. Reduce equipment such as TV Booster, TV Splitter, Gigabit Switch, Telephone Junction Box to save electricity in the long run. There are no maintenance costs
5. Supports high speed internet more than 100 times compared to the old system. That means faster Internet access in the future and support for high-bandwidth IPTV.
6. Very long service life. Fiber Optic A light fiber glass. And is used as the main network in the telecommunications system. The price of fiber optic cable is down. Can be used in communication systems in buildings to provide longer service life than traditional copper cable. The longest ever Lifetime.
7. The price of the fiber cable in the network will be at least 5 times cheaper. If we build a building, we have to buy Lan cable 10 baht per meter, TV cable is 10 baht per meter, Telephone line is 5 baht per meter. If we switched to fiber optic cable to support 3 services. We use fiber optic cable at 5 Baht per meter (less than 20 Baht per meter)
8. Easy to maintain in one room, there is only one fiber optic cable and one device can support all services. If there is a problem, just check the source or destination device. Make a team of engineers or technician Can solve problems easily. (Most importantly, it reduces the time spent searching. And fix it faster quickly.)

- Worth the investment. Investment in fiber optic systems is cheaper, save power, lower administrative costs, easier to maintain, Support future Technology, Longer service life.

Today. Your business is ready to switch to fiber optic systems. Or no?
